Description The kit is built on a scale-looking ladder frame construction with stand-up front shock and lay-down rear dampers that make way for

the scale roll cage construction. The steering servo is located in the front part of the chassis and the steering assembly is of a zero-Ackermann design for maximized steering performance. Angled front king pins minimize the scrub radius for further increased steering efficiency. The heavy-duty threaded aluminium shock absorbers utilize 3.5mm shock shafts and the transmission, with all-metal internal gears, is of a torque twist reducing design. Optionally a 2-speed hi/lo transmission conversion will become available to add speed when needed. The kit is rounded out by grippy tires, a cool looking body shell a couple of scale accessories.

Please note: Body is in clear lexan and is shown painted for advertising purposes only.

Features:

- Comes with rugged GA44 axles
- Forward weight balance for greater trail capability
- Frame mounted steering servo for increased scale realism
- Beefy TTR transmission
- Dual slipper clutch
- All metal transmission gears

Specifications:

- Width: 240mm
- Height: 226mm
- Length: 515mm
- Wheel Base: 313mm
- Ground Clearance: 79mm
- Weight: (no electronics) 4.2lbs
